## MICRO-ABRASIVE BLASTING SYSTEMS SELECTION GUIDE

To assist you in selecting the proper Micro-Abrasive Blasting System for your specific application, please refer to the information provided below. Complete this form and return it to us and you will be contacted by our customer service staff to assist you with your application.

### GENERAL APPLICATION GUIDE

PRODUCT	APPLICATION	FEATURES				
		Metal Cabinet L = Large	Resin Cabinet L=Large S=Small	Number of Media Tanks	Instant-Off Feature	Warranty Period
PROBLAST	Cleaning Coating Removal Surface Prep Deburring Etching Marking		L	2		1 Yr
MASTER PROBLAST			L	2	X	1 Yr
PROBLAST II			S	2		1 Yr
PROBLAST 3 ESD		L		3		1 Yr
PROBLAST 3 ESD		L		3		1 Yr
MASTER PROBLAST 3-ESD		L		3	X	1 Yr
MASTER PROBLAST 3-ESD		L		3	X	1 Yr
MOBILE PROBLAST		No Tank		1		1 Yr

Warranty covers all "non-abrasive contact" components

#### Additional Features

- All Blasters include a 0-100 psi adjustable water filter-regulator and foot switch
- Tank selector controls are located inside the cabinet (except for mobile unit)
- All blasters handle any type of blasting media from 60-360 grit (25-250 micron)
- Designed for pinpoint accuracy on small or hard to reach areas via a variety of pencil point nozzles
- No metal wear points from tank to nozzle
- Quick change hose fittings for easy maintenance and low cost of ownership
- "Master" models include the unique instant on/off feature (located inside cabinet)
- Comfortable wrist cuffs (except mobile unit)

Problast & Master Problast

Problast II

Problast 3 & ESD

Mobile Problast

## QUESTIONNAIRE - MICRO ABRASIVE BLASTING SYSTEMS

To assist us in determining the correct blaster & vac system for your application, please answer the following questions, or provide us with this information via phone or email.

What is your application? (Deburring, cleaning, material removal, surface preparation, etc.)?

Do you require pinpoint accuracy to reach small or recessed areas?

Do you need to sandblast a large area (broadcast spray)?

The "Instant On" feature is available with all of the "Master" series blasters. This feature instantly stops the flow of blast media upon releasing the foot switch, thus maintaining pressure in the media tanks for instant start-up. Would this feature be important for your application?

What size media are you currently using, or do you think you will need for your application?

Do you require the use of more than 1 type and size blast media? If yes, what do you think you need?
