“YOUR SOURCE FOR WORKPLACE SOLUTIONS”

MODEL # SP-0X & SP-00X SERIES POWER PACKS

OPERATING & MAINTENANCE INSTRUCTIONS

- Maximum air pressure 100 psi. For longest tool life it is recommended to operate at the lowest possible pressure to do the job.
- Tools must be lubricated; either an on-line oiler located no more than 6 ft. from the tool or oil directly through rear of power pack with several drops of pneumatic oil weekly or as needed.
- Do not exceed recommended wire sizes for jaw
- Jaws should be cleaned and foreign material removed weekly, more often as necessary.
- Tools can be made either “right hand” or “left hand” by reversing the jaw in housing. When jaws are in place, pivot screw should be “snug” against steel insert. **DO NOT OVERTIGHTEN.**
- If tool is used in production line, check pivot screw for tightness daily.

TO RESHARPEN JAWS, RETURN TO CPS.
